

## SOFT/HARD GOODS & ELECTRONICS CLEANING

**SOFT GOODS:** Why replace what you can restore?

Fact: Approximately **85%** of all soft goods contents found in a typical home **can be restored** rather than replaced when contaminated with smoke, soot, mold, sewage, or biohazards, at a fraction of the replacement cost.

AIR has invested in and is a certified operator of the **Esporta Wash System**<sup>®</sup>, which has revolutionized the soft contents restoration industry. Now, almost anything from bulky sports uniforms, leather goods, luggage, personal protective wear--even fragile and sentimental items such as plush toys--can all be cleaned and sanitized to food grade bacteria levels, using Esporta's patented equipment, wash cycle technology and earth-friendly detergents.

**HARD GOODS:** Precise and efficient technology

Our **Ultrasonics cleaning system** for hard surfaces can make quick work of cleaning and restoring intricate items from delicate, porcelain figures, fine china, and precision brass musical instruments, to industrial equipment--even firearms.

Our controlled, repeatable process and equipment ensure consistent and high quality results, every time. Plus, if for some reason our cleaning methods do not yield an acceptably presentable result, then we don't charge!

**Electronics cleaning:** Giving contaminated electronics a new lease on life.

Electronics contaminated by smoke and soot are usually written off due to the conductive and corrosive nature of the contaminants. With thorough and proper cleaning, using our **deionized water wash and drying system**, many items can be successfully restored to pre-loss (or better) condition, and at the very least, can enable owners to restart and save off precious or private data files. Typical items we restore:

- Televisions/Monitors
- Computers/laptops
- Stereo, A/V equipment
- Appliances
- Medical Equipment

**Computerized pack-out and inventory system**

Our software, imaging and tagging equipment enables us to accurately intake, count, clean, store, retrieve and deliver contents back to the property owner upon request.
